

# FIRST ITALIAN SYMPOSIUM OF BROKEN FILE MANAGEMENT

*Dr. Giovanni Messina – Dr. Waleed Kurdi*

**ACCREDITATO ECM**

**3/4 MARZO 2023**

**NOVOTEL VIA MECENATE 121, MILANO**

**MIKROS VIALE T. A. EDISON 621, SESTO SAN GIOVANNI (MI)**

## FRIDAY 3 MARCH | Abstract

The aim of the course is to make the participant acquire new and innovative minimally invasive techniques for the removal and bypass of fractured files inside the roots. These techniques allow the management of files even in the apex and of 1 mm long with a 6% taper of final preparation. The course will also give a guide on the legal medical responsibility in the first treatment and in the retreatment following a failure. It will be structured in two phases: the first day will be dedicated to the theoretical part where the techniques of bypass and file removal will be explained, as well as the management of the ledges, the choice and use of right tools, the preparation of the straight line and the staging platform. The second day will be dedicated to the hands-on, both for the removal and for the bypass, with the use of microscopes for individual use for each single student.

## SATURDAY 4<sup>TH</sup> MARCH | Abstract

The presence of broken file inside the roots is always an unfavorable event both for primary and secondary treatment, making it impossible to rehab the tooth. Having the ability to shift a sure failure into a resolution has always been considered the prerogative of the endodontic specialist, but having the ability to bypass or even remove the broken file is within the reach of any healthcare professional who has acquired the right techniques. The right techniques allows both the success management of the case both to perform a minimally invasive treatment, essential for the long-term maintenance of the dental element.
